

Strathclyde University Incubator's UpStarts programme assisted us through the first, key steps towards becoming a viable business. We say we take the pain out of transfection™ but SUI and UpStarts helped take the pain out of financing and assisting the growing of the business.

Steve Howell, CEO, Deliverics.

# Big business thinking at molecular level

---

Deliverics Ltd is a Scottish-based company producing products and kits that deliver molecules into and onto cells for the world-wide R&D laboratory market. Cellular delivery forms the basis for many areas of research and development in the life sciences and is an important aspect of therapeutic treatment in many diseases.

Having started as a spin-out from the University of Edinburgh's Department of Chemistry in April 2010, the company had to secure initial financing to enable the launch of its first product at the Medica International trade fair.

That product, SAFECTin™, is designed to efficiently deliver RNA and DNA into cells in a one-step procedure.

SUI helped Deliverics grow, by:

- Providing initial funding
- Undertaking all book-keeping, management accounts and credit control
- Initiating ongoing networking and mentoring.
